SKIN NEEDLING

Skin needling stimulates the production of new collagen in the skin by puncturing the dermis with microscopic needles. The treatment utilises the skin's ability to heal itself. In addition to treating enlarged pores, fine wrinkles, loss of elasticity, minor scarring (including acne scarring), and sun damage, it also enables topical products to penetrate deeper into the skin, increasing their effectiveness. Skin needling is suitable for all skin types (except active acne or Rosacea). Numbing cream will be applied 30 minutes prior to your treatment, to make your treatment as painless and comfortable as possible.
